

# Future Green Logistics

# DB Group's Carbon Footprint 2017

## DB Schenker's share accounts for >50%.

### Shares in million tons CO<sub>2</sub>e

# DB's Climate Protection Target 2006-2030

**-50% CO<sub>2</sub>e**  
**2006-2030 per tkm**

Translates into an Exit Strategy  
out of

**Diesel**  
**Kerosene**  
**Heavy Fuel Oil**  
**by renewable energy -**  
**electricity and hydrogen**

# Portfolio of alternative powertrain concepts investigated at DB Schenker in Europe.

## CNG, LNG & LPG

- Approx. 200 vehicles in operation
- Only small effect in terms of GHG reduction

## Biofuels

- Approx. 3,000 trucks in Sweden with various shares of biofuels
- Cooperation with energy producers
- Well developed infrastructure
- Governmental support
- 50-90% less GHG emissions

## Fuso eCanter

- Three vehicles of the first all-electric light duty truck in Germany in 2018
- Two vehicles in France in 2018 to prepare for the Ban of Diesel vehicles announced for Paris 2024

## eDucato

- Five vehicles in Paris in 2018
- Regular Ducatos are converted to electric vehicles

## Cargo Bikes & Mikro Hubs/Depots

- Increasing use in urban logistics in France, Germany and Norway
- Cooperation with several start-ups
- Micro Hubs and Cargo Bikes optimize sustainable inner city logistics

With other initiatives we focus on and shape alternative and eco friendly driving to reduce CO2 emission in cities

### ■ Mini-hubs and cargo cycles in city centres

- Improving local air quality in cities
- Help DBS achieve CO2 emission reduction target

### ■ E-fleets and charging network

- Improving local air quality in cities
- Help DBS achieve CO2 emission reduction target
- DBS pilot: public fund project iHub Berlin/GER

### ■ Roll-out model for cargo bike in Europe to reduce truck traffic in inner cities

- Improving local air quality in cities
- Reducing truck traffic in inner cities

# DB Schenker joins the EV 100 Initiative

**Transitioning vehicle use to Electric Vehicles\* including related charging facilities until 2030**

EV integration into directly controlled (owned/leased) fleets:

- 100% of vehicles up to 3.5t to be EV
- 50% of vehicles between 3.5t and 7.5t to be EV
- all urban/last mile delivery to be EV

*\*) EVs will be understood to include pure battery vehicles, plug-in hybrids, extended-range vehicles as well as fuel cells (min 30 miles/50km electric range<sup>2</sup>).*

# Help to remove barriers on the way to zero emission trucks

- Encourage production by OEMs through Regulation (standards) and Incentives (funds)
- Provide information for vehicle owners on funds and how to get access
- Help to provide a critical mass of demand in order to drive OEMs to technology migration
- Set up business cases together with customers (shippers), suppliers (transport providers) and OEMs
- Develop a scaling roadmap together with the actors in the supply chain
